

Dimensions in mm

Properties

Panic bar System 162, deep matt black powder-coated for equipping exit doors - approval to EN 1125 only in combination with tested locks - with CE marking. Approved for fire and smoke doors, listing in the national technical approval test certificate of the respective door manufacturer in conjunction with DIN 18273, DIN 4102, DIN 1634, for single leaf or double doorsets in escape routes (inactive or inactive and active leaf)

Handle made of stainless steel, diameter 25 mm with tubular handle made of stainless steel, diameter 30 mm. Handle tube positioned as one-sided handle, therefore clear visualisation of the optimum pressure point on the lock side. The stainless steel tubes are connected by a square bar - telescopic. Low projection depending on the operating angle of the lock follower, but at least in accordance with DIN 1125, grade 2:
